Thermapen® Blue

Care and Use Guidelines

Thermapen Blue is a precision Bluetooth thermometer. With proper care it should last for years of daily use.

Open probe to turn on. Close to turn off. Amber light indicates battery is ok, Red light means time to change battery. Open battery compartment to replace battery ONLY if red light flashes any time during use.

DON'T store instrument with probe open. Fold probe away for storage.

DON'T open battery compartment to replace battery unless red light flashes.

Instrument is water and dust resistant. Clean daily with anti-bacterial cleaning or probe wipe.

DON'T clean in dishwasher.

DON'T drop, or rest on surfaces above 122°F (50°C).

Probe hub rotates up to 180 degrees. Clean rotating hub after each use to keep food and oils from collecting on hub.

DON'T force probe open past 180 degrees, hub stop will break.

DON'T open or close probe hub while immersed in water or during cleaning as moisture can enter housing.

DON'T immerse probe into food up to or past the hub as food can enter hub and into housing.

DON'T allow food to collect on/around hub as it will wipe inside during use.

Insert probe tip into center of food for best performance. Clean probe and fold away when not in use.

DON'T use probe to pry, stab, jab, hammer, strike, chop, or lift foods as probe will bend or break and hub seal will be compromised.

DON'T expose probe to temperature above 572°F (300°C) as probe will fail.

Battery clip

Open battery compartment to replace battery, 1 x AAA, only when red light flashes. Take care not to bend battery clip back too far during replacement. Battery life of 1,000 hours should last months before needing replacement.

DON'T pull back on battery clip too far, clip will not spring back to touch battery.

DON'T try to flatten battery clip even if sprung. Battery cover will naturally press clip onto battery properly, but not if flattened.

DON'T overtighten screw after replacing battery.

Install silicone rubber boot to protect from drops and high heat. Remove for cleaning.

For warranty or service information please call our Tech Support line at 1-800-393-6434.

Physical damage to the probe or housing, food ingress inside rotating hub or housing, and damage to battery clip are not covered under warranty. Repairs can be made by ThermoWorks Technical Support by calling 1-800-393-6434 or emailing techsupport@thermoworks.com
